

KODAK INSTAMATIC 50

Serial nr.: DD112

Characteristics and functions

In the early 1960s Kodak presented a cartridge film called "Kodapak". The "INSTAMATIC 50" is Kodak's first camera that uses the new Kodapak 126 films. This film provides images of 28x28mm. The Kodapak 126 was available as a color negative film (Kodakolor-X), a color slide film (Kodachrome-x and Ektachrome-X) and a negative B/W film (Verichrome Pan). The Kodak Instamatic 50 was marketed in Great Britain in 1963 a few weeks before the presentation of the Instamatic 100 in the United States.

The camera has a 43mm focal length meniscus lens.

The diaphragm is fixed (f / 11). There are two shutter speeds:

1/40 "- when the front selector is positioned at the bottom (hazy sun or flash).

1/90 "- when the front selector is positioned at the top (full sun).

On the top cap is the flash socket for a dedicated flash, sold separately.

Weight 8.04oz.

Width 4.25in. Height 2.44in. Thickness 2.17in.

Technical specifications

Film Type:	Kodapak 126
Shutter:	Central – Mechanical
Meter:	No
Diaphragms:	f/11
Times :	1/40" – 1/90"
Lens:	43mm.
Flash:	Dedicated flash socket.
Focusing:	Fixed
Characteristic:	Gray plastic and metal body with aluminum front.
Accessories:	Nylon wrist strap.
