

SPECIAL INSTRUCTIONS

"REMOVAL OF BOOTS"

Pick up G. I. JOE and place in palm of left hand with toes up and head toward you. Grasp toe of boot between thumb and first finger of right hand and place second finger behind heel.

Point toe down. Pull down and away and boot will slide off foot.

In order to protect the leg member against an extreme pull, it is normal for the foot to come out of the leg. It is easily re-inserted by pushing the foot on the leg.
