

THE ADVENTURES OF G.I. JOE[®] ADVENTURER[™]

THE SECRET OF THE MUMMY'S TOMB

Instructions

Your ATV rolls on land or floats in the water. The independent axle suspension allows your ATV to roll over all types of terrain without tipping over. Your ATV is scaled to fit G.I. Joe Adventurer. G.I. Joe is not included in this set, however, see illustration 1 to see how G.I. Joe sits in the driver's seat. There are no batteries needed to operate your ATV and winch.

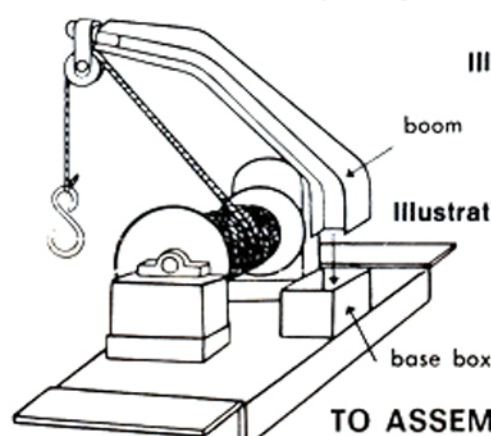

Illustration #1

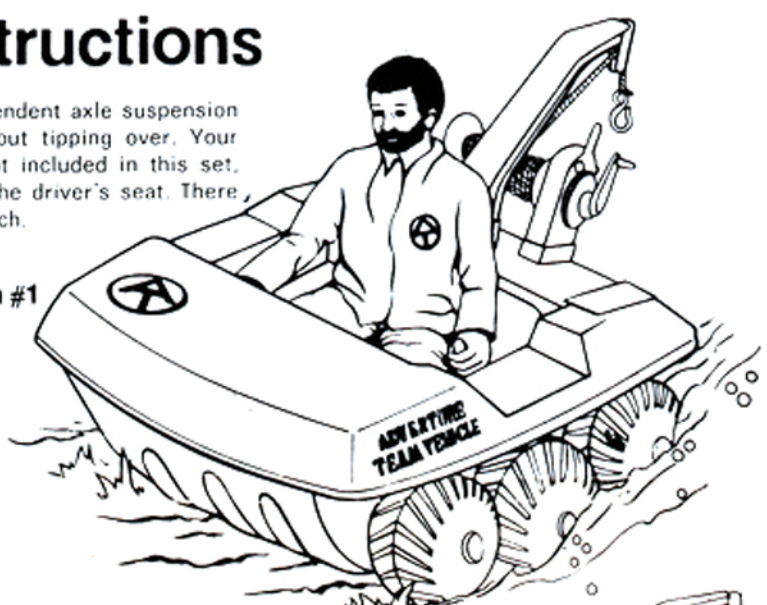

Illustration #2

TO ASSEMBLE WINCH

1. Insert the bottom end of the winch boom into the base box as shown in illustration 2.
2. The winch fits over the storage compartment of the ATV by fitting the four lock pins of the winch into the four keyhole openings of the ATV. See illustration 3. Pull the winch toward the rear to lock in position.

TO OPERATE THE WINCH

To raise the hook, turn the handle in a counter-clockwise direction. See illustration 4.

To lower the hook, hold the pawl in a neutral position (so that the pawl is not engaged in the gear teeth) and turn the handle in a clockwise direction. See illustration 5.

Illustration #3

TO OPEN THE MUMMY'S COFFIN

There is a secret button on the bottom of the mummy's coffin near the mummy's feet. Push the button with your fingernail or a pencil point and slide the bottom section away from the mummy's head. See illustration 6.

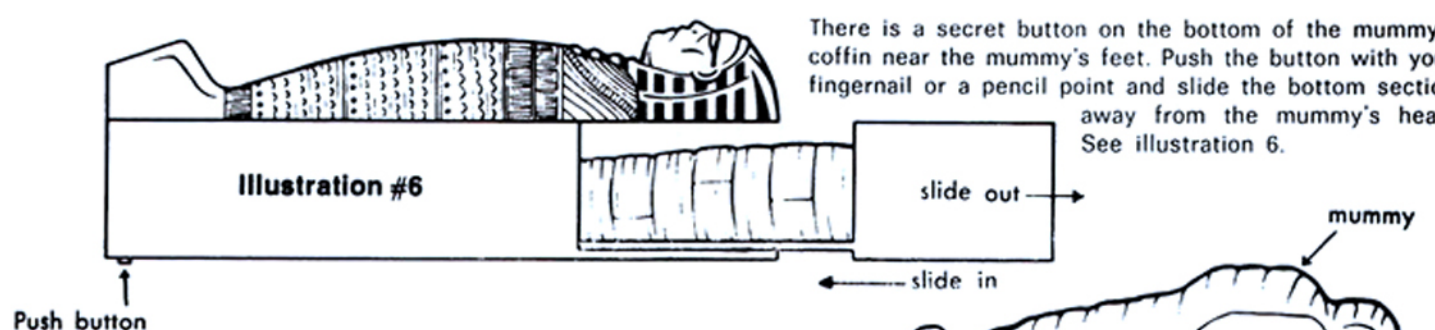

Illustration #6

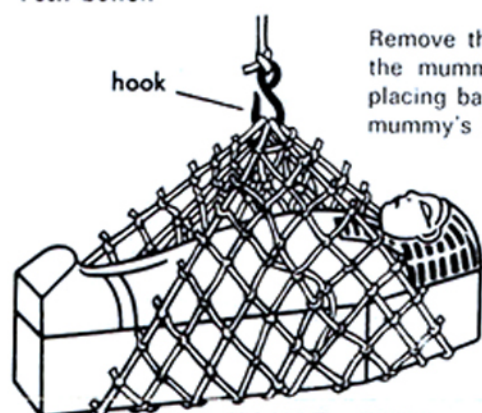

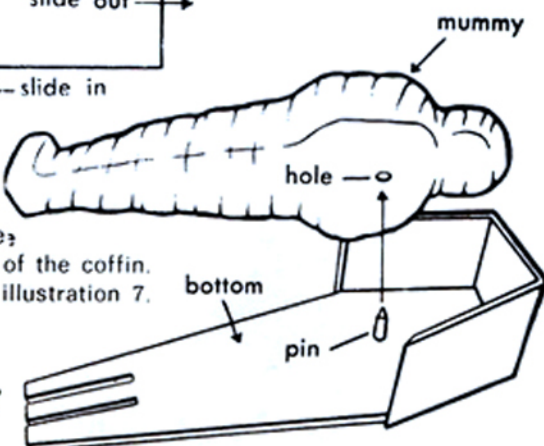

ILLUSTRATION #8

Remove the mummy from the coffin by lifting the mummy straight up. Replace mummy by placing back into coffin so that the hole in the mummy's back fits over the pin in the bottom of the coffin. See illustration 7.

Illustration #7

To lift the mummy's coffin with the winch, lay the net out flat. Place the coffin in the center of the net. Gather the ends of the net together and slip onto hook from winch. See illustration 8.

Your ATV was designed to be used with some of the other G.I. Joe Adventures. The tiger cage from the "White Tiger Hunt", No. 7436, fits into the rear compartment of the ATV. Remove the winch and place the tie down cleats into the keyhole openings and tie down the tiger cage with string. See illustration 9.

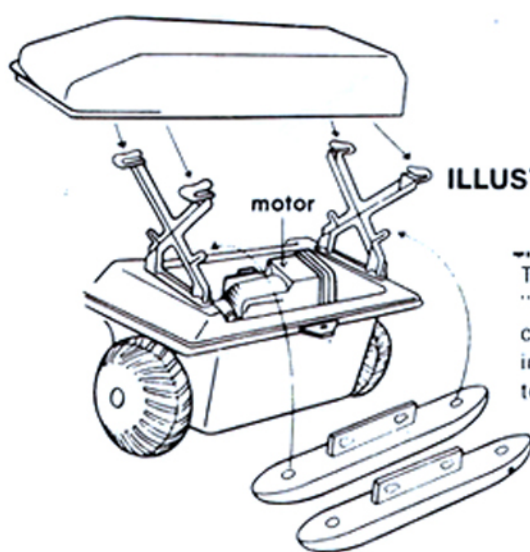

ILLUSTRATION #10

The pontoon boat and motor from the "Capture of the Pygmy Gorilla", No. 7437, can also be carried by the ATV. Place the motor into the storage compartment, insert the pontoon brackets into the keyhole openings and place the boat on top of the brackets as shown in illustration 10.
