

TRAINING CENTER INSTRUCTIONS

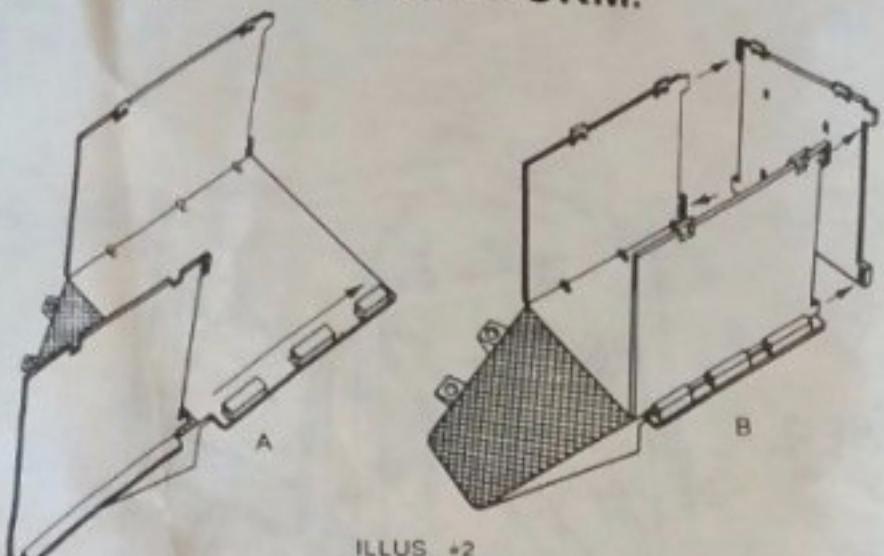

1. ASSEMBLING THE TOWER:

BASE:

1. Take 2 of the largest pieces for the bottom section of the base and slip the tabs on one side into the lock tabs on the other piece. Illus. #1. Repeat with all four sections until they are joined in a square. Illus. A.
2. Snap the slightly smaller pieces together for the mid-section of the tower in the same way. Illus. B. Repeat with the smallest size pieces for the top section. (The side with the open section on the top is the front of the tower.) Illus. C.
3. To fit the tower together, stack the mid-section on top of the bottom so that the large tabs at each corner slide into the slots. Illus. D. Press slightly with your finger to help fit them in the opening. Stack the third section on top of the bottom two in the same way.

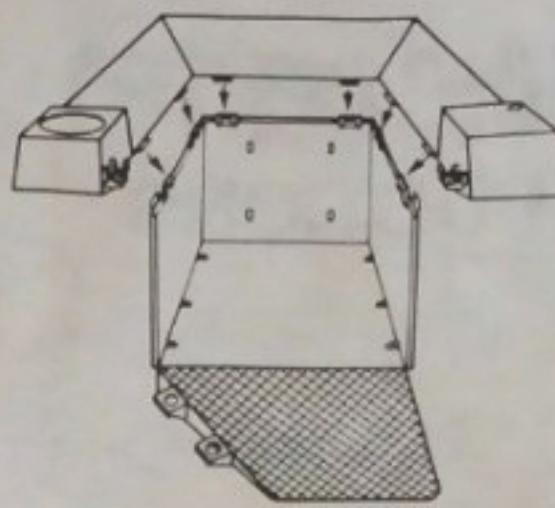

2. ASSEMBLING PLATFORM:

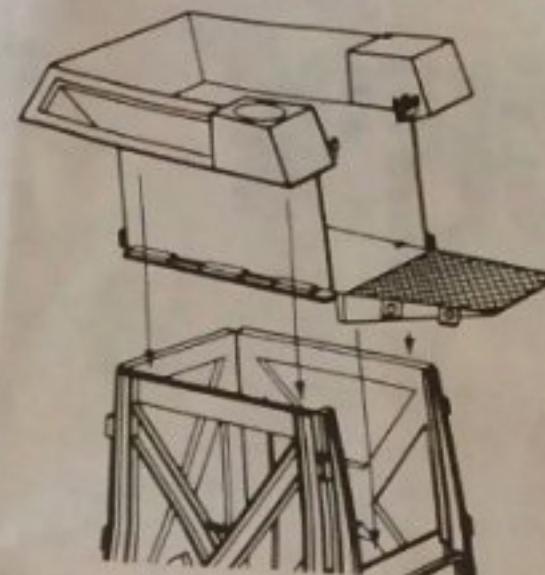

ILLUS. #2

- Slide the 2 side pieces, ridge-side out, into the grooves on the base of the platform as shown. Illus. #2A. Snap the back piece onto the lock tabs on each side. Illus. #2B.

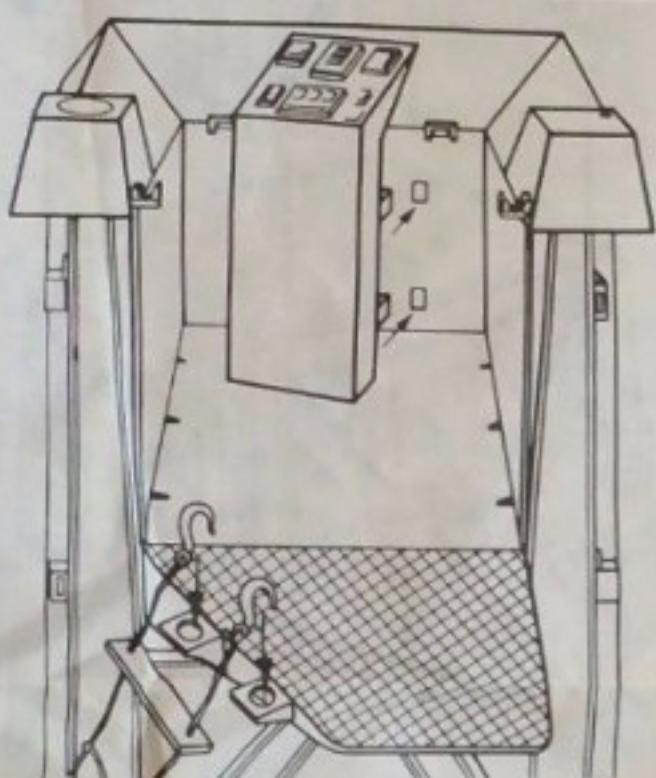

ILLUS. #3

- Fit the collar around the housing platform by snapping it into the lock tabs on each side. (The tabs on the sides of the platform housing stay on the outside of the collar for support.) Illus. #3.

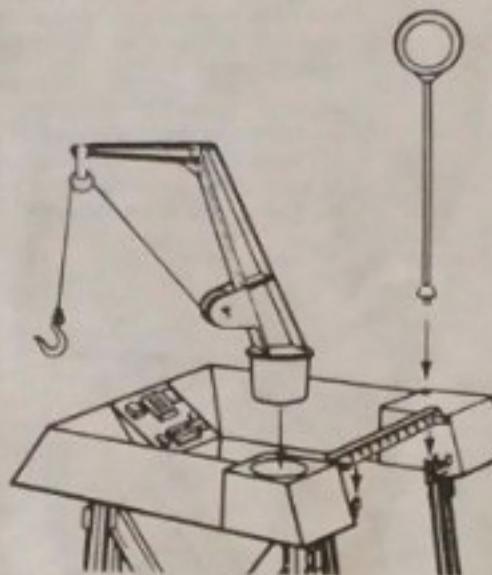

ILLUS. #4

- Lift the finished platform housing unit up and slide it down the center of the open top of the tower until it rests on the supports as shown. Illus. #4.

ILLUS. #5

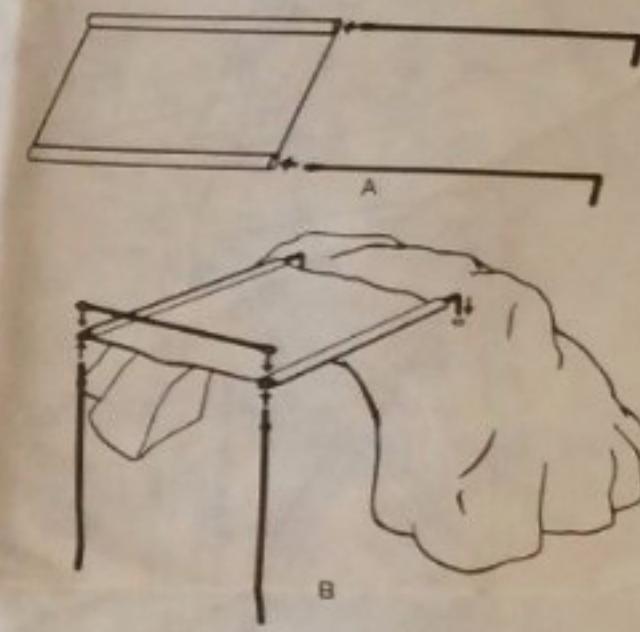

- Insert the control console by pressing the four tabs on the back through the slots on the rear wall of the platform housing. Illus. #5.
- Hang the rope ladder by inserting the 2 hooks at the top into the holes at the front of the platform. Illus. #5.

ILLUS. #6

- Take the cable support arch, center it as shown, and snap it underneath the bottom of the collar. Illus. #6.
- Insert the crane down into the large well on the top of the collar housing unit. Illus. #6.
- Insert the antenna into the small hole on the other side of the collar housing. Illus. #6.
- Take the tie bar and insert the T-bar at each end into the sockets on either side at the front of the platform. Illus. #6. The tie bar may be lifted up at either end to give G.I. Joe easier access!
- Free the hook on the crane and crank the handle of the winch to raise and lower it for cargo and supplies.

3. ASSEMBLING TENT:

ILLUS. #7

- Slide the 2 L-shaped hooks into the seams on the sides of the tent awning. Illus. #7A. Drop the hooks into the 2 holes on the top of the cave. Illus. #7B.
- Insert the two side supports, knob-side up, into the loops at the other end of each of the L-shaped hooks. Illus. #7B.
- Fit the center support bar over the ends of each of the side supports to anchor them firmly. Illus. #7B.

THE SEARCHLIGHT

- To operate the searchlight, install 2 "D" cell batteries, not included. Snap off the cover on the bottom of the searchlight by depressing the tab as shown in Illus. #1.

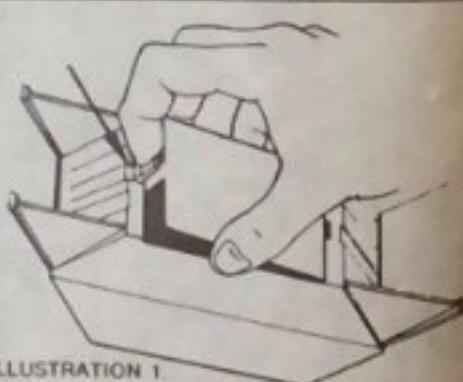

ILLUSTRATION 1

- Insert the batteries in opposite directions, following the outline indicated inside the case. Illus. #2. Fit the cover back on the bottom, inserting the two side tabs into the slots and snapping into place.

ILLUSTRATION 2

- Flip the searchlight over. The light is controlled by an on-off switch on the base. The beam may be turned in almost any direction — up, down, and around, by rotating the light fixture on the top. Illus. #3.
