

MINOLTA BINOCULARS

ACTIVA 8x25WP

1999

Serial Nr. no
Minolta Code: 8592

Characteristics and Functions

These binoculars are constructed using BAK-4 type glass. The roof prisms of the Active 8x25WP are built with this special high refraction glass that guarantees uniform illumination and excellent light transmission by increasing the contrast and sharpness of the observed subjects. The eyepieces are of the anti-fatigue type as they offer a greater extension of the field of view of the pupil exiting the eyepiece lens itself, allowing eyeglass wearers not to remove them when looking through this type of eyepiece. The construction of this type of pocket binoculars allows for a double folding of the two telescopes in order to considerably reduce the overall dimensions when stored. The 8x25 Water Proof is waterproof according to IEC's IPX4 standard. Weight 295g. shoulder strap and caps not included.

Width 65mm. Thickness 46mm. Height 106mm.
