

# MINOLTA CABLE RELEASE II

Serial Nr. no  
Minolta Code: 8003-200

## Characteristics and Functions

The Minolta Cable Release II was introduced in 1976 as an evolution of the Minolta Cable Release. This mechanical release is applied to cameras via the threaded socket and is used to take slow or long shutter speeds (bulb) with tripod cameras. To shoot in pose B, you have to rotate the shutter speed selector on the cameras in B, press the knob of the central rod and rotate the ribbed wheel clockwise: the trigger is thus locked in the working position. When it is necessary to interrupt the exposure, simply rotate the ruled wheel counterclockwise and the shutter returns to the rest position. Since 1981 it has been distributed under the new brand with the rising sun in the "O".

Weight 30g.
