

MINOLTA LENS CAP

for Autocord

Serial Nr. no
Minolta Code: 7392-200

Characteristics and Functions

This flexible plastic cap is dedicated to Minolta Autocord, double-lens cameras for Roll-film 120 film. The cap application on the lenses must be performed with two maneuvers: first insert the cap on the bayonet of the upper lens by tilting it in motion that the reference located in the upper right quadrant is perfectly aligned with the vertical, then the cap is rotated to the left so that the lower circular part coincides with the lower objective; at this point it is fixed with a pressure. Conversely, to remove it, you need to act on the lower tab, lift the lower part and rotate the cap counterclockwise to free the upper part from the lens bayonet.

Weight 4g. Dimensions: width 36mm.; height 81mm.; thickness 6mm.
