

MINOLTA MINI 35 SLIDE PROJECTOR – 1958

Serial Nr. 1341857
Minolta Code: 0351-100

Characteristics and Functions

Minolta produces countless accessories for 35mm film cameras. Among these, the “Mini 35” Slide Projector, which is used for single projection of 35mm slides, enters the catalog in 1958. mounted on 5x5cm frames. A horizontal slide cursor supplied (not included in the photograph) is used to introduce a second slide while projecting the previous one, to then pass it into projection by moving the cursor, and so on alternately. The device has a solid and accurate construction in biscuit-colored metal whose painting produces a wrinkled effect while internally it is satin black; the other parts are in chromed steel. To bring the projector into the position of use, press the two circular steel buttons located laterally in the front position and lift / rotate the shell. The lamp compartment has no cover to allow for better ventilation. Then position the slide holder, insert the slide and, with the lamp on, focus by rotating the external lens mount. The lens is a P-Rokkor 2.5 / 75mm. At the end of the slide holder there are two ivory-colored plastic buttons that are used to improve the grip of the slide itself. In the lower part there is the mount with thread to fix the “Mini 35” to a tripod, a steel plate that shows “100 Volts” silk-screened in red; “AC DC”; Max 100 Watts” and 4 black rubber feet.

Weight 912g. Length 130mm., Width 76mm., Height 110mm. when the appliance is closed. Length 225mm., Width 145mm. (with slide holder in operating position) and height 133mm.
