

MINOLTA POLARIZING FILTER d.55mm. (CIRCULAR)

Serial Nr. no
Minolta Code: 7255-311

Characteristics and Functions

With the polarizing filter, reflections on water and reflective surfaces such as glass and mirrors can be eliminated. The polarizer also makes skies and clouds more dramatic without altering the colors. The Minolta Polarizing Filter, in its "circular" version, has been marketed since 1985 with the advent of the Minolta SLR Autofocus. Normal polarizer cannot be used with AF cameras as the autofocus system would be badly affected. Weight 32g. External diameter of the frame 68mm. Thickness 11mm.
