

MINOLTA POLARIZING FILTER d.55mm. (New Logo)

Serial Nr. no
Minolta Code: 7255-210

Characteristics and Functions

With the polarizing filter, reflections on water and reflective surfaces such as glass and mirrors can be eliminated. The polarizer also makes skies and clouds more dramatic without altering the colors. Using cameras without a light meter, the exposure must be compensated by 1 or 2 stops. The Minolta Polarizing Filter since 1981 is marketed in the package with the new logo with the rising sun in the "O". It cannot be used with autofocus lenses and cameras.

Weight 38g. External diameter of the frame 70mm. Thickness 12mm.
