This very first set up of a 135mm. f.1: 3,5 MC Rokkor has a transitional aesthetic aspect between the Auto Rokkor and the MC Rokkor.

The aperture ring is placed near the camera, but not so close that you can see the aperture values in the viewfinder, where it is set up; in fact the coupling foot with the MC selector is twice as long as the other optics of the MC Rokkor series.

Furthermore, the ribbed parts of the focus ring are not concave, but flat.

The identification code 135mm, in orange color, is placed on both sides of the distance scales.
