Minolta Lens Made in Japan MC Rokkor - PF 1:1.4 f=58mm

This lens is a direct descendant of the 58mm. f.1 / 1,4 Auto Rokkor. From this perspective too, there are lenses produced with rare and radioactive materials such as lanthanum and thorium. Unfortunately, the glasses that contain these elements tend, with time and light, to take on a yellowish color which is irrelevant in black and white photography, while in color photography it slightly warms the images.

This problem can be avoided by taking care to always keep the lens covered to protect the lenses from light.

The identification codes 58mm, in orange color, are placed on the sides of the distance scales.
