In 1986, the series of autofocus lenses was completed towards long focal lengths with this impressive 75-300 zoom lens of considerable size.

The body of the lens is covered, in the central part, by a rubber band with a dense inclined strip (1st type). Given the high weight of the lenses and the length of the helix, the focus limiter was introduced, which is placed on the left side of the barrel. This system allows you to speed up the motorized focus. The "Macro" position is set at the 300mm focal length. In the focus scales a blue line appears between 1.5mt. and 3.3mt. Which delimits the field of close-up shots.

The collimation signal with the ring nut of the camera optics is made up of a red plastic hemisphere.
