

# AUXILIARY FLASHER

## #256

(for Wink-Light)

For use with Wink Light only

This is a small flashgun using AG-1 flashbulbs, and is designed to plug into the side of the Wink-Light. It was intended for low-light photography using 3000-speed film in situations where there was insufficient ambient light to use the Wink-Light alone. Power for the gun comes from the same B-C circuit which powers the Wink-Light bulb.

**Note:** Reflector swivels for bounce flash capability.
