

# COLOR ADAPTER KIT #660

Kit of accessories adapts the J66 to use Type 48 color film. The kit includes three clip-on front plates (#566) which block part of the selenium cell and provide new calibration marks for the lighten/darken control - this adapts the exposure system for the far slower speed of the color film (ASA 75 rather than 3000).

**Notes:** For use with Model J66 only.  
See also the #566 and #567.
